

Monthly Economic Activity Index

July 2025

Introduction

The Monthly Economic Activity Index (MEAI) is a short-term indicator to measure movements of economic activity in Suriname. It is an important tool for policy makers, researchers, analysts, but also for the private sector and other stakeholders. For example, the MEAI can be supportive for businesses when considering important investment decisions.

Graph 1: MEAI 12-month growth: January 2020 - July 2025

Source: Centrale Bank van Suriname.

Analysis¹

Economic activity improved from 0.0% in June 2025² to 0.4% in July 2025, mainly driven by construction (Graph 1 and Table 1).

The sectors that contributed the most to the 0.4% growth are explained in more detail below:

- *Wholesale and retail trade; repair of motor vehicles and motorcycles* contributed 2.0 percentage point, primarily driven by a 25% increase in the sales of building materials.
- *Accommodation and food service activities* with an impact of 0.4 percentage point, supported by a 5% increase in restaurant turnovers and a 12% rise in hotel overnight stays.
- *Financial and insurance activities* added 0.4 percentage point, as real premiums for insurances and pensions grew by 12%.

The growth in these sectors was partially offset by a contraction in the following sectors:

- *Manufacturing* contributed 1.8 percentage point, mainly due to a decline in the gold production of around 26%, driven by lower mill throughput and a reduced ore grade in large-scale gold mining, as well as decreased exports from small-scale mining, likely related to suspected smuggling.
- *Mining & quarrying* with an impact of 0.9 percentage point, reflecting a 17% decrease in gold ore production.

¹ The growth rates, unless otherwise indicated, are based on the 12-month moving average: August 2024 until July 2025 compared to August 2023 until July 2024.

² The growth estimate for June 2025 was revised from 0.2% to 0.0% due to data updates, as explained in 'Revisions & Data Issues'.

Revisions & data issues

The MEAI growth for May 2025 was updated, because of Wholesale and retail trade; repair of motor vehicles and motorcycles, due to data updates and revised figures from several companies.

The MEAI team continues its efforts to collect data from respondents with a significant delay in reporting with the aim of improving the quality of the index.

Brief explanation methodology

The MEAI uses survey data and administrative records. The first consists of data derived from an establishment survey conducted among approximately 200 companies, which includes 'key players'. The administrative records consist of data from Customs (Asycuda), the Centrale Bank van Suriname, the General Bureau of Statistics (GBS), financial reports and production data of selected companies. The MEAI is a fixed-based index that uses the structure of the economy in 2015 as a base year. Subsequently the Laspeyres formula is applied to generate an index for each activity. Weights by industry derived from the nominal value added as published by the GBS, are used to generate the total index for the economy. The growth rates are based on the 12-month moving average approach.

Importance of timely reporting

Since validating and analyzing the data are time-consuming, it is of utmost importance that data are reported timely, which means no later than three weeks after the closing of the reference month. This enables the short-term indicator to be disseminated within 45 days, in line with international best practices. If the reported data are received with a large delay, the short-term indicator of economic activity for Suriname cannot be compiled and published in a timely manner.

Table 1: MEAI per industry: August 2023- July 2025 (base year 2015=100)

Period	Industry												MEAI	Growth in % ³⁾
